

```
import numpy as np
import matplotlib.pyplot as plt
```

```
#sigmoid activation function
def sig(x):
    return 1/(1 + np.exp(-x))
```

```
x = np.linspace(-10, 10, 50)
p = sig(x)
plt.plot(x, p)
plt.title("Activation Fucntion: Sigmoid")
plt.show()
```

```
def tanh(x):
    return np.tanh(x)
x = np.linspace(-10, 10)
plt.plot(x, tanh(x))
plt.title('Activation Function: Tanh')
plt.show()
```
